

Mast Uri[®] Locate Reagent

Statement of purpose

Orientation marker as an accessory to Mast Uri[®] Plates and Mast Uri[®] Plus.

Technical Data

Description

Mast Uri[®] Locate is a solution used to indicate that Mast Uri[®] Plates have been inoculated and will act as an orientation marker for the Mast Uri[®] Plus to ensure that the plate has been placed in the correct orientation.

Product Formulation

A liquid reagent containing a non-hazardous commercially formulated red ink with fluorescein dye in a white plastic dropper bottle.

Interpretation

Mast Uri[®] Plates can be read on the Mast Uri[®] Plus. The system will indicate if the plate has been orientated incorrectly by alerting the user to re-insert the plate in the correct orientation.

Storage and Shelf Life

All containers should be kept tightly closed and stored in a dark, dry place at 25°C or below until the expiry date shown on the pack label.

Quality Control

MPM-CON can be used to validate that the reagent is performing as expected. If the reagent is not recognized when the plate is correctly orientated, then the plate set can be read with the Mast Uri[®] Locate function disabled and the manufacturer must be notified of the fault.

Limitations of Use

The reagent is light sensitive and can degrade if exposed to white light for an extended period of time.
